

# TruVision Navigator 6.0

TruVision video management software

## Overview

TruVision Navigator 6.0 provides users of TruVision NVRs, DVRs or IP cameras with an intuitive and feature rich video management package.

This license free tool provides a unified user interface for configuration and management of a TruVision video system. Whether analog or IP, newly launched or legacy, TruVision Navigator leads the way.

## Rich feature set

A rich feature set provides the tools required to efficiently manage and configure a TruVision system. Key features include; triggering recorder or IP camera relay outputs, display of disk analysis in time bar, auto discovery of recorders, cameras and encoders on the LAN, TruVision 360° camera dewarping, event video monitor, maps, detachable tabs, tampering monitor, extensive user rights management, client/host architecture, health diagnostic reports, saving custom views, exporting of snapshots and encrypted video files, and many more.

## Investment protection

TruVision Navigator does not leave anyone behind. Additional to supporting the full range of current recorders and cameras, TruVision Navigator supports a wide set of legacy TruVision recorders including SymSafe, TVR 10, TVR 20, TVR 40, TVN 20 and more.

Supporting this legacy, we make sure customers can easily expand their video surveillance solutions towards the future, without requiring full systems to be replaced. We make sure you can expand and transition at your own pace, without jeopardizing past investments.

## Scalable

The possibilities are virtually unlimited. TruVision Navigator can manage one recorder with one camera connected, or hundreds of recorders with thousands of cameras. The device tree architecture allows you to create location folders and structures which enables you to easily manage a multitude of locations. Additionally, TruVision Navigator can be deployed as a standalone system, or as a client/host application, with a virtually unlimited amount of clients and users that can connect to the host database.

This scalability ensures that users can easily expand and consolidate video surveillance systems without drastic changes to their existing security setup.

## Standard Features

- Backward and forward compatibility to ensure investment protection
- TruVision 360° camera dewarping in Live & Playback
- Mix & match analog & IP devices in one single viewing interface
- Graphical maps for fast and efficient camera selection
- Up to 25 video tiles per view, up to 10 tabs or 9 detachable screens
- Time bar disk analysis for efficient video retrieval
- Trigger relay outputs of recorders & IP cameras
- Show/hide VCA and motion events metadata (latest generation devices only)
- Extensive user management for efficient and secure administration
- Network Time Protocol (NTP) service keeps all system devices synchronized
- Extensive health diagnostic reports
- Scalable architecture, from standalone to multi-site host/client applications
- Borderless video
- Tampering monitor to highlight scenery changes
- Bandwidth & CPU optimization when viewing multiple camera streams simultaneously
- Video & snapshot export functionality to efficiently gather evidence
- Configuration interface for current, legacy, analog, IP & Hybrid devices
- Event monitoring with dedicated event video monitor
- Audit history
- Saving & calling up public or private custom views
