- Support for maps (drop in cameras & open video from map)
- Broader set of custom views
- Switch to sub stream as of 1 tile (free format for amount of tiles)
- Support for tab views (detachable & up to 10)
- Embedded notifier in main screen
- Ability to save public & private custom views
- Addition of Event monitor (live only, possible to drag live image into other video tile to access playback)
- Borderless video
- Timeout for display of in-tile information
- Ability to connect same camera multiple times
- Smart motion search functionality for analog cameras & NVRs recording metadata
- Operator log
- 360° dewarping in live & playback
- Highlight camera in device tree when selected tile
- Select multiple tiles by holding down ctrl
- Close tiles by clicking Del

Summary of limitations

- The camera level disk analysis feature is only supported for the following devices TVR 10,11,12,12HD,41,42,44HD,60 and TVN 10,20,21,50,70
- TVR 60 and TVN 20 do not support (D->) types alarm (outputs on an IP camera)
- Camera Model and Manufacturer are displayed as n/a for IP cameras added as Devices via the 'Add via Discovery tool' option
- Receiving "Audio Exception" alerts in the Notifier panel even if no Audio input is connected to 385 Camera
- "Alarm" search shows different results between TruNav and Web Browser
- When TVF Camera is added as Device to TruNav, the three PTZ cameras views are not enabled by default
- After login into camera configuration page, Live View, Playback, log pages and Logout are also shown
- "Tours" option in PTZ Palette is enabled for TVF (360) Cameras.
- Notifier Sound, Preserve Aspect Ratio in Settings-Client-tab and Browse-Destination-Path in Tasks pane are not getting saved after upgrading from 5.0SP1/5.0SP3 final builds to 5.0SP4 (5.0.400.8).
